Film Solutions

WPF
windshield film

Skyfol WPF is a protective film for windshields that has a special nano coating to **decrease the level of damages caused by stone chips**. Its high quality scratch-resistant coating provides **perfect protection every day**, and thanks to its nano coating, drops of water and contamination will get off the surface more easily. Due to its high level of optical clarity, the driver's view of the road remains unobstructed. **The film blocks 99% of UV radiation**, therefore Skyfol WPF protects not only the windshield, **but passengers as well**.

FEATURES OF THE SPECIAL TOPCOAT.

DuraShield

Its high quality makes the film totally resistant to external exposure.

GravelGuard

Decreases the level of damages caused by stone chips and other physical impacts

H2ORepel

Due to its water-repellent feature, the surface is very easy to clean.

ScratchCure

Microscratches will disappear from its patented surface coating.

StainResist

The surface coating does not let contamination into deeper layers, therefore stains will be easy to remove.

RAW MATERIAL:

Skyfol WPF is a biodegradable, polyester-based aliphatic thermo polyurethane film. As it is resistant to orange peel, yellowing and UV, it is widely used for the windshield protection of vehicles used outdoors.

STRUCTURE OF THE FILM:
